Equipment Strategies and Maintenance Readiness

Business opportunity

An important Copper Operation in central America requires the definition of a detailed operational preparation plan, including the Ultra-class fleet maintenance strategies with the respective cultural integration to facilitate quality maintenance in its processes.

Solution

- › Develop detailed maintenance plans, PM verification lists and documentation of quality implementation for all equipment covered under this scope.
- › Analyse critical parts to define stocking strategy.
- › Create cargo sheets for data and budgeting for resource planning.
- › Support and accompany reliable planning personnel during the improvement implementation process.

Results

- › A complete Operational Readiness plan was provided for the project, including the life cycle costs for the equipment, maintenance guidelines, AMP and onsite support to train client teams in the details.
- › Currently, our client is based on the AMP created in this project.
- › Currently, JD Edwards is based on the data and guidelines used in this project.
